Security Vulnerability Report

Title: OTP Verification Bypass - Account Takeover

Severity: High

Summary:

The OTP verification mechanism during password reset can be bypassed by manipulating the backend request. The server responds with SUCCESS state even when the OTP validation process is improperly handled. This allows attackers to reset passwords and take over user accounts.

Impact:

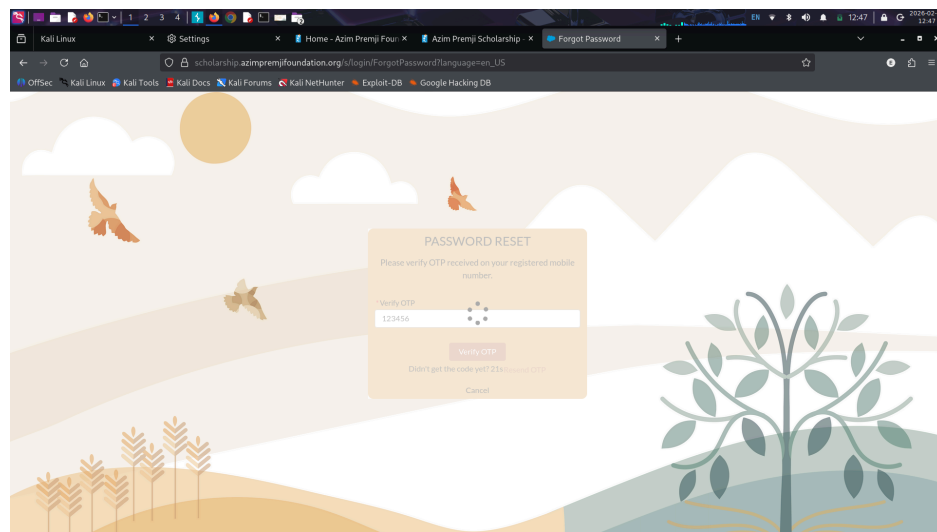

- 1 Full account takeover possible
- 2 Unauthorized password reset
- 3 Access to applicant dashboard and personal data
- 4 Compromise of sensitive user information

Steps to Reproduce:

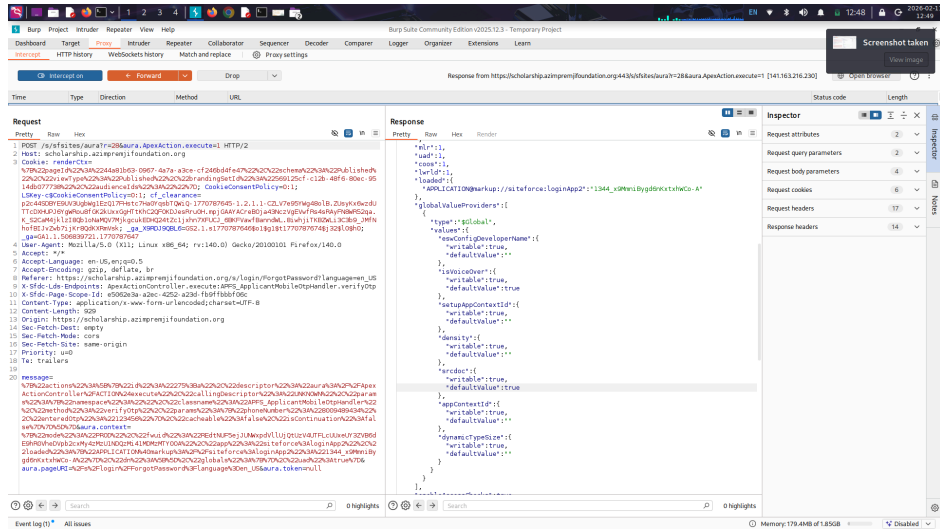

- 1 Navigate to Forgot Password page.
- 2 Enter valid Aadhaar number.
- 3 Intercept OTP verification request using proxy tool.
- 4 Modify/Replay request and observe SUCCESS response.
- 5 Set new password without proper OTP validation.
- 6 Gain access to victim account dashboard.
